

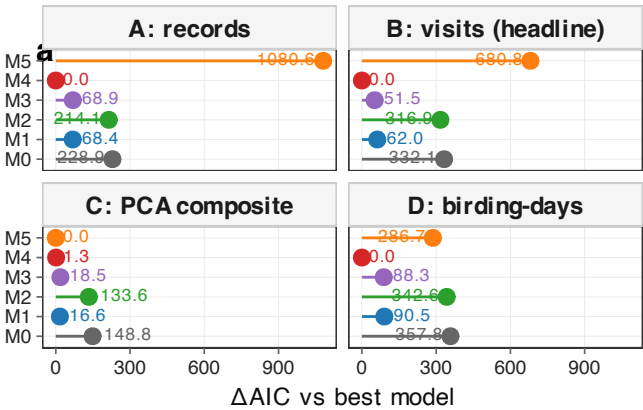

Figure 2 v4 — Province headline + M5 offset + raincloud panorama

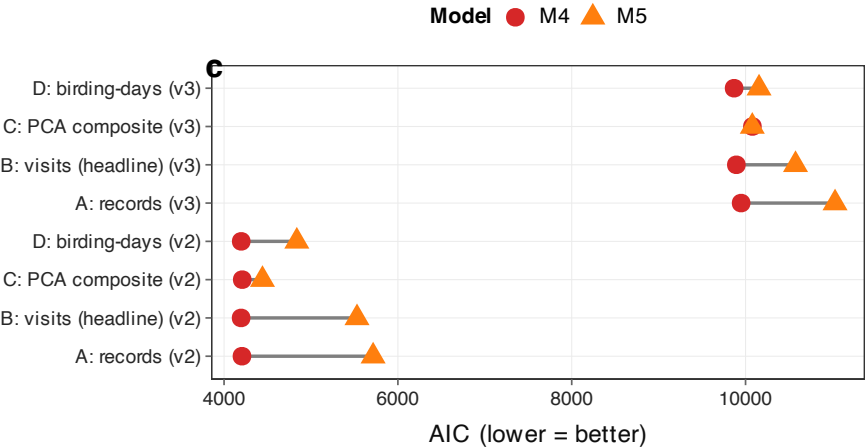

Model-selection ladder M0-M5 — v3 risk set

M4 (climate × effort interaction) consistently wins; M5 (effort-as-offset) underperforms by 420 in the PCA spec (red) has tighter intervals due to larger effort

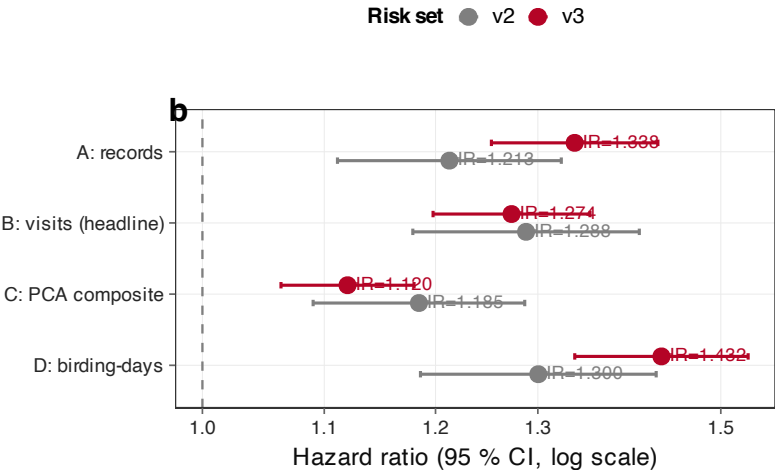

M4 (interaction) vs M5 (offset) — M4 wins 7/8

Lines connect M4 ↔ M5 within each (run × spec); leftmost point is preferred.

M4 interaction HR — v2 ↔ v3 across 4 effort spec

HR = 1.20 in the PCA spec (red) has tighter intervals due to larger effort

M4 interaction HR — bootstrap raincloud (v2 + v3 × 4)

Half-violin = posterior density; bar = 50%/95% interval; dots = 200 draws ~ 1
