

Complete-risk-set headline (SDM threshold = 50): climate x effort moderation of new bird records

a

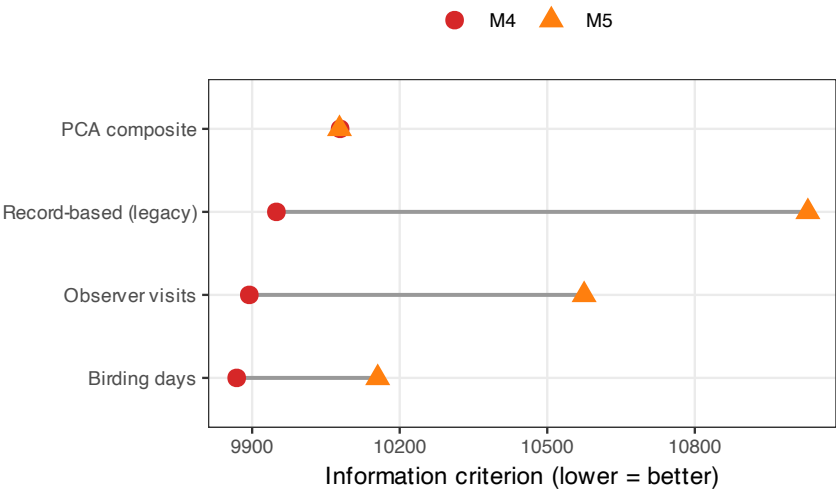

Climate x effort interaction — complete risk set

188,870 rows · 463 species · 817 events (SDM threshold = 50). All four effort metrics positive, $P < 10^{-4}$. M4 (leftmost = better fit) beats the offset model in 3 of 4 metrics.

b

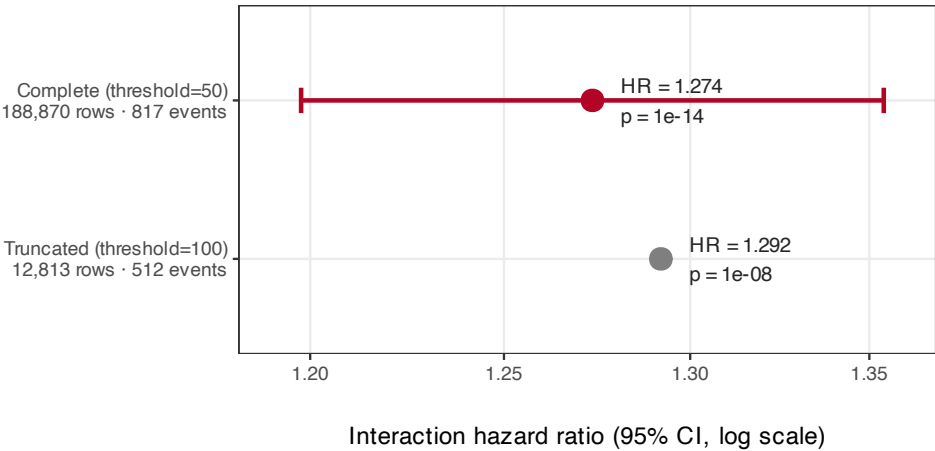

Effort moderates, not scales (M4 vs M5)

c

Result strengthens in the complete risk set

Preserved as truncation is relaxed; the complete set adds 60% more events.

d

Interaction is consistently positive across metrics

Bootstrap distribution (complete set); all mass above 1 (no effect).
